Executive summary

Problem

University students and fresh grads are struggling to find jobs, with many job sites and workday portals having repetitive and tedious processes

Consideration

How can we use AI to optimize this process to help job seekers better find jobs?

Strategy

Jorkmate

A low-friction web platform that enables motivated job seekers to easily apply for jobs and clear screening processes quickly

Market

All university undergraduates and fresh grads across Tech and Finance

Tech Stack

Provider

Usage

Does the backend orchestration

Score + match blurb on each card (swipe right on one)

Resume → form answers for that job

Cloud browser fills + submits the application, streaming progress back

Who to Target: Today, we observe that fresh grads in the tech space are finding difficulty mass applying for jobs

Nadine Park
21 years old

- Young jobseeker in NUS
- Purpose-driven, socially conscious
- Looking for professional development opportunities
- Limited time outside formal commitments

Ari Tan
23 years old

- SWE intern @ Redwood Labs
- Targeting SWE/Data Science/ML roles
- Enjoys hiking and ice skating
- Interested in roles based in Singapore + Hong Kong

Daniel Brooks
25 years old

- 2 years financial analysis in London
- LSE Economics.
- Enjoys football
- Interested in VC investment roles based in London + New York
